GENERAL INDEX

- Alston Block, Namurian sedimentation 325ff.
amino acid dating, Quaternary bivalves and gastropods 418-419, 463
amino acid dating, Quaternary bivalves, North Yorkshire 224, 463
Anglesey, late Dinantian karstification and pedogenesis 297-321
Annual Report 1989 115-116
Annual Report 1990 339-341
Askrigg Block, shallow marine sedimentation 149-162
bentonites, U. Silurian, North Yorkshire 277-285
bentonites, U. Silurian, mineralogy and geochemistry 280-285
brachiopods, Dinantian, Derbyshire 287-295
breccias, solution and collapse, Triassic 17-20
bryozoans, U. Permian 33-40
calcretes, late Dinantian, Anglesey 302
carbonate mounds, late Dinantian, Derbyshire 23-32
carbonate mounds, macrofaunal taphonomy and preservation 25-32
clay mineralogy, L. Cretaceous, Southern North Sea Basin 257-260
clay mineralogy, bentonites, U. Silurian 280-282
coalmine planning, methods of fault projection 209-219
County Durham, Quaternary stratigraphy and sedimentation 415-420
Craven Basin, Dinantian stratigraphy and sedimentation 163-187
Cumbria, Coal Measures field meeting 119-120
cyclic sedimentation, Namurian, Northern England 325-328
dacites, petrography, geochemistry and genesis 393-408
Derbyshire Dome, structure 265-276
Derbyshire, Namurian megaspores 143-147
Derbyshire, late Dinantian carbonate mounds 23-32
Derbyshire, late Dinantian sedimentation 23-32, 189-196
Derbyshire, Dinantian brachiopods 287-295
Devon, Dinantian stratigraphy and structure 447-460
Easington Raised Beach, Co. Durham 415-420
East Irish Sea Basin, Triassic 1-22
East Midland Shelf, Lower Jurassic correlation 137-141
echinoid, U. Permian, tooth structure and phylogeny 47-60
faults, geometry 209-219
faults, methods of projection for coalmine planning 209-219
Fearnside's Prize 344
field meeting 1989 119-120
gastropods, U. Permian 347-365
geochemistry, Ordovician dacites 400-404
GOOSSENS, R. F., Sorby medallist 343
graptolites, late Silurian, southern Australia 41-46
Great Cyclothem 323-327
halites, Triassic, East Irish Sea Basin 6-17
heavy metals, Humber estuary 75-80
Humber estuary, heavy metals, *Scrobicularia* clay 75-80
ichnology, limulid trace fossil 221
Isle of Man, Carboniferous Limestone, syn-sedimentary deformation 99-113
John Phillips Medal 343-344
KNOX, R. W. O'B., discussion of paper 461-462
Lake District, Ordovician dacites 393-408
LEEDER, M. R., John Phillips medallist 343-344
megaspores, Namurian 143-147
micropalaeontology, L. Cretaceous nannofossils 428-434
mineral stratigraphy, L. Cretaceous 255-264, 461-462
mineralisation, Northern Pennine Orefields 335
MITCHELL, S. F., Moore medallist 343
Moore Medal 343, 344
nannofossils, L. Cretaceous, Southern North Sea 421-434
North Yorkshire, early Namurian sedimentation 149-162
North Yorkshire, M. Jurassic stratigraphy and sedimentation 375-392
North Yorkshire, M. Jurassic pedogenesis, diagenesis and sedimentation 61-74
North Yorkshire, Quaternary stratigraphy 223-226, 463-465
North Yorkshire, U. Silurian bentonites 277-285
North Yorkshire, late Triassic to early Jurassic stratigraphy 367-374
North-east England, Permian bryozoans 33-40
North-east England, U. Permian echinoid 47-60
North-east England, U. Permian gastropods 347-365
North-east England, U. Permian sandstone petrography 409-414
North-east England, U. Cretaceous stratigraphy and fauna 227-254
North-west England, Dinantian stratigraphy and sedimentation 163-187
North-west England, Trias 1-22
northern England, Namurian sedimentation 323-334
Northumberland Trough, Namurian sedimentation 327ff.
Northumberland Trough, Viséan sedimentation 435-446
palaeoecology, U. Jurassic, South Humberside 197-208
palaeoecology, Scarborough Formation (M. Jurassic) 375-387
palaeoecology, U. Permian echinoid, 48-50
palaeoecology, U. Permian gastropods 349-351
palaeokarsts, late Dinantian, Derbyshire 192ff.
palaeokarsts, late Dinantian, Anglesey 300-302
palaeontology, U. Permian bryozoans 33-40
palaeontology, U. Permian gastropods 347-365
palaeontology, echinoid, U. Permian 47-60
palaeontology, graptolites, late Silurian 41-46
palaeosols (terra-rossa), late Dinantian, Anglesey, 302
palynology, Namurian megaspores 143-147
palynology, M. Jurassic, North Yorkshire 375-392
palynology, U. Carboniferous, Titterstone Clee Coalfield 83-98
pedogenesis, M. Jurassic, North Yorkshire 61-74
pedogenesis, late Dinantian, Anglesey 297-321
petrography, Ordovician dacites 399-400
petrography, U. Permian sandstone 409-414
petrography, late Dinantian calcretes, 303-315
pollen, Quaternary, North Yorkshire 224-225

Presidential Address 1987, A. A. Wilson 1-22
 quartz overgrowths, in U. Permian sandstone 409-414
 radiometric dating, Ordovician dacites 404-405
 raised beach deposits, Quaternary, Co. Durham 415-420
 rhizoliths, late Dinantian, Anglesey, 303-305
 salt dissolution 17-20
 sand wave complex, early Namurian, Askrigg Block 149-162
 sedimentology, Namurian shallow marine sand wave complex 149-162
 sedimentology, late Dinantian shallow marine carbonates 189-196
 sedimentology, M. Jurassic shallow marine shelf deposits 375-387
 sedimentology, Viséan fluvio-deltaic, lacustrine and tidal deposits 435-446
 seismic refraction study, Derbyshire Dome 265-276
 Shropshire, Coal Measures palynostratigraphy 81-98
 SMITH, E. G., obituary 466
 Society activities 1989, 117-118
 Society activities 1990, 342
 Sorby Medal 343
 South Humberside, U. Jurassic, palaeoecology, sedimentation 197-208
 Southern North Sea Basin, L. Cretaceous mineral stratigraphy 255-264, 461-462
 Southern North Sea, L. Cretaceous stratigraphy and nanno-fossils 421-434
 spheruliths, sideritic, electron microprobe analyses 66-67
 stable isotope analyses, M. Jurassic, North Yorkshire 67-70
 syn-sedimentary deformation, Carboniferous Limestone, Isle of Man 99-113
 THOMPSON, J., Moore medallist 344
 Titterstone Cleve Coalfield, palynostratigraphy 81-98
 trace fossil, limulid, M. Jurassic, North Yorkshire 221
 TURNER, N., Fearnside Prize presentation 344
 Vale of Belvoir, Lower Jurassic correlation 136-137
 VERSEY, H. C., obituary 345
 WILSON, A. A., Presidential Address 1987 1-22
 WILSON, S. J., discussion of paper 463-465
 WOODLAND, A. W., obituary 345-346

Tunstallia gen. nov. 358-359

YORKSHIRE GEOLOGICAL SOCIETY

OCCASIONAL PUBLICATIONS

ISSN 0143 — 6635

No. 1. Geological Aspects of Development and Planning in Northern England

Editor: P. T. Warren. 1970.

No. 2. The Geology and Mineral Resources of Yorkshire

Editors: D. H. Rayner and J. E. Hemingway. 1974. (*Out of print*).

No. 3. The Geology of the Lake District

Editor: F. Moseley. 1978. (*Out of print*).

No. 4. The Carboniferous of the U.S.S.R.

Reports presented to the I.U.G.S. Subcommittee on Carboniferous Stratigraphy at the 8th International Congress on Carboniferous Stratigraphy and Geology held at Moscow, 1975.

Editors: R. H. Wagner, A. C. Higgins and S. V. Meyen. 1979.

No. 5. Andros Island, Chalk and Oceanic Oozes

Unpublished work of Maurice Black.

Editors: C. V. Jeans and P. F. Rawson. 1980.

Occasional Publications Nos. 1, 4, 5 and back numbers of the Society Proceedings are available from Mr P. S. Valois, Edward Boyle Library, The University, Leeds LS2 9JT.

No. 6. The Role of Tectonics in Devonian and Carboniferous Sedimentation in the British Isles.

Editors: R. S. Arthurton, P. Gutteridge and S. C. Nolan. 1989.

Occasional Publication No. 6 is available from the Geological Society Publishing House, Unit 7 Brassmill Enterprise Centre, Brassmill Lane, Bath BA1 3JN

Instructions to Authors

The *Proceedings of the Yorkshire Geological Society* is a biannual publication that caters for original research papers on all aspects of geology. Emphasis is placed on (i) papers relating to the geology of the north of England (but including aspects of more than local interest) and (ii) papers of general geological interest. Papers should normally be between 3000 and 15000 words in length, including allowances made for references and text-figures (a full printed page consists of c. 900 words). Shorter contributions will be published as 'Short Communications'; longer contributions should not be submitted without prior consultation with the Editors. Review papers are normally published by invitation only, but ideas for a review paper may be submitted to the Editors for assessment by the Publications Committee.

1. SUBMISSION OF PAPERS

Papers are welcome from Society members and non-members alike.

Three complete copies of papers should be submitted to the Editors. Typescripts should be in their final form, and should be arranged according to the layout used in the latest issue of the Proceedings (see below for details). Typescripts that deviate excessively from the standard layout will be returned to the authors for modification. Copies of all illustrations should be at anticipated final publication size and of sufficient quality to allow proper assessment of their composition and reproducibility. Copies of half-tones *must* be photographic prints not photocopies. One set of camera-ready photographic prints of all line drawings will be requested on submission of the revised manuscript; these will be reproduced directly by the printer and should be at final publication size (e.g. single column, page width or full page size — see 2.6). Originals of line drawings should therefore be retained by the authors; they will be requested in exceptional circumstances only.

2. PREPARATION OF PAPERS

2.1. Typescripts

Typescripts should be double-spaced throughout (including references and figure captions), with each page numbered serially; A4 size is preferred. Only the first order headings should be typed in capitals. The typescripts should be arranged as follows:

1. Title, which should be concise yet informative. The title should be typed in lower case.
2. Summary. This should not exceed 250 words, and should be a self-contained summary of the main achievements of the paper and not a mere statement of the scope and contents of the paper.
3. Main text. This should be organised according to the system of headings described in section 2.2. Reference to text-figures may be made thus: Figure 1 or (Fig. 1). References to the literature take the following forms: Young and Bird (1822), Young & Bird (1822) or (Young & Bird 1822), depending on the context. Where the reference involves three or more authors, the first author only should be given, followed by *et al.* Cross-references in the text may be related to the relevant numbered section, rather than to a page number. Words to be printed in italics should be underlined.
4. Appendices, if necessary.
5. References (see section 2.5).
6. Name and full postal address of authors.
7. Tables, each typed on a separate sheet, together with its caption.
8. List of figure captions, typed on a separate sheet.
9. A list of contents should be provided on an unnumbered sheet.

2.2. Headings

Four grades of headings are normally used in the Proceedings:

1. FIRST-ORDER HEADING

1.1. Second-order heading. Text follows on next line.

1.1.1. Third-order heading. Text follows on next line.

Fourth-order heading. Text follows on same line.

In certain circumstances (e.g. where there are frequent short sections) it may be decided to vary this arrangement. The *introductory section* should not be numbered: the heading 'Introduction' may, for clarity, be used on the typescript, although it will not be used in the printed paper. The first line of the first paragraph following each heading should begin at the left-hand margin (no indent).

2.3. Systematic palaeontology

The layout for palaeontological systematics should follow the usual conventions. Examples of house style may be found in previous volumes (from Vol. 45 onwards), e.g. Vol. 45, pp.113-120, 179-182,

220-223; Vol. 46, pp. pp.1-10, 57-75. There is no rigid rule concerning the system of sub-headings used, except that each paper should be internally consistent.

2.4. Systematic lithostratigraphy

Any new lithostratigraphic terms should be rigorously defined to conform to the various codes for lithostratigraphic nomenclature. Examples of house style may be found in previous volumes (from Vol. 45 onwards), e.g. Vol. 45, pp. 52-57, 103-106; Vol. 46, pp.57-75.

2.5. Reference list

The accuracy of references is the responsibility of the authors.

Periodical titles should be *quoted in full*, and follow the wording on the title sheet. Where indication of the country or region of origin would assist in the identification of the periodical, additional wording should be included in parentheses, using Roman characters: e.g. *Nature* (London); *Journal of the Geological Society* (London). In book titles, capital letters should be used for proper nouns only (except in German titles, where all nouns should possess capital letters). Accents should be included in all foreign book and serial titles.

Black, M. 1934. Sedimentation of the Aalenian rocks of Yorkshire. *Proceedings of the Yorkshire Geological Society* 22, 265-279.

Trotter, F. M. & Hollingworth, S. E. 1928. The Alston Block. *Geological Magazine* 65, 433-448.

Arkell, W. J. 1933. *The Jurassic System in Great Britain*. Clarendon Press, Oxford.

Dunham, K. C. 1974. Epigenetic minerals. Pp.293-308 in Rayner, D. H. & Hemingway, J. E. (editors) *The geology and mineral resources of Yorkshire*. Yorkshire Geological Society. (Or, if the source book is quoted more than twice: Pp.293-308 in Rayner, D. H. & Hemingway, J. E. (1974) q.v. — *quoted as a separate reference.*)

Many titles (e.g. special publications, conference proceedings) are ambiguous in terms of *periodical* or *book* classifications. If in doubt, give the entire reference in Roman characters, without underlining. Unpublished reports are not usually included in the reference list, but an exception is made for postgraduate theses, which are treated as books. Examples of house style are:

Fox-Strangways, C. & Barrow, G. 1882. *The geology of the country between Whitby and Scarborough* (2nd edition). Memoir of the Geological Survey of England and Wales, Sheets 35, 44.

George, T. N. 1969. British Dinantian stratigraphy. Pp. 193-218 in *Compte Rendu du 6^{me} Congrès International de Stratigraphie et de Géologie du Carbonifère, Sheffield 1967, Volume 1*.

Harris, A. L., Holland, C. H. & Leake, B. E. (editors) 1979. *The Caledonides of the British Isles - reviewed*. Geological Society of London Special Publication 8.

2.6. Illustrations

Illustrations may be prepared to fit a printed column width of 85mm or a page width of 176mm. The printed page height is 250mm. If it is intended that the caption be placed beneath a full-page illustration, the height of the latter will need to be modified accordingly. Line drawings should be draughted at 1½ times the final printed size, on good quality white paper or plastic tracing paper. Lettering should be no less than 1mm high on reduction. Half-tone illustrations should be high-quality glossy prints with good contrast. Remember that screen printing has the effect of reducing contrast and generally lightening the tone, so that areas intended to be black (such as artificial backgrounds or areas of deep shadow) should be truly black and not dark grey. Magnification should be indicated by means of a scale bar on the photograph or, if this is not possible, in the figure caption. All half-tone illustrations are referred to as Figures, not Plates. In composite illustrations the individual photographs should be labelled 1, 2, 3, etc. or A, B, C, etc. Where possible, labels should be on the photographs, not in the space between.

2.7. Tables

These should be designed to column width (85mm) or page width (176mm) and should be submitted, with captions, on separate sheets.

3. OFFPRINTS

25 free offprints per paper are provided: additional copies may be purchased and should be ordered at page proof stage.

Acknowledgement. Some figures published in the Proceedings display the National Grid, taken from the Ordnance Survey map with the permission of the Controller of Her Majesty's Stationery Office.
