YORKSHIRE GEOLOGICAL SOCIETY.

OBJECTS.

This Society was founded in 1837, and thus ranks as one of the earliest county geological societies. The original purpose was the investigation of the Yorkshire Coalfield and the gathering of such definite information about its seams of coal and ironstone as would be of use in mining operations. So that its earliest task was the preparation of a great and detailed section of the Coalfield—probably the first such section to be prepared.

As Geology has developed, the matters relating to the technical side of mining have been relegated to the more recently formed mining associations, and the Society, widening (in 1877) its scope from the West Riding, to which it was confined, now embraces the whole county and has as its purview the whole of geological science. Its members individually have had a great share in moulding many branches of thought, and the organisation has undertaken co-operatively or shared in a number of notable investigations. Particularly important were its studies of the Pleistocene fauna in connection with certain cave and other bone-bearing deposits, the tracing of Underground Waters, particularly in the Carboniferous Limestone area of Ingleborough, and the encouragement it gave at many meetings to investigations of the history of the Ice Age in Yorkshire.

MEMBERSHIP.

There is no entrance fee.

A Member may be elected at any General Meeting.

Annual Subscription, Thirteen Shillings (payable January 1st).

Life Membership Fee, Six Guineas.

A General Meeting for the reading of papers is held in Leeds each spring.

General Meetings associated with extended Field Excursions under the leadership of prominent geologists are held during the spring and summer months in various parts of the county, or in such areas outside the county as afford important instruction on the problems of Yorkshire Geology.

The Annual General Meeting is held usually in November in one of the principal towns of Yorkshire.

PUBLICATIONS.

The Proceedings of the Society, illustrated by plans, sections, and photographs, are issued free to Members each year.

The back volumes, except the earliest issues, are obtainable on application to the Hon. Librarian of the Society, The University, Leeds.

Printed by Sherratt and Hughes, Manchester.
