Baliothyreus becki sp. nov. 248
Dicellograptus praeanceps sp. nov. 6
Instruction to authors

The Proceedings of the Yorkshire Geological Society is a biannual publication that caters for original research papers on all aspects of geology. Emphasis is placed on (i) papers relating to the geology of the north of England (but including aspects of more than local interest) and (ii) papers of general geological interest. Papers should be between 2500 and 15,000 words in length, including references (a full printed page consists of 9000 words). Longer contributions should not be submitted without prior consultation with the Editors. Review papers are normally published by invitation only, but ideas for a review paper may be submitted to the Editors for assessment by the Publications Committee.

1. SUBMISSION OF PAPERS

Papers are welcome from Society members and non-members alike. They are accepted on the understanding that they have not been published elsewhere and authors are asked to assign copyright to the Yorkshire Geological Society. Three complete copies of papers should be submitted to the Editors, Proceedings of the Yorkshire Geological Society, Geol. Soc. of London, Clarendon House, 34-35, Southampton Street, London W.C.2. Copies of all illustrations must be photographic prints not photocopies.

Typescripts should be in their final form, and should be arranged according to the layout used in the latest issue of the Proceedings. Typescripts that deviate excessively from the standard layout will be returned to the authors for modification. Copies of all illustrations should be at anticipated final publication size and of sufficient quality to allow proper assessment of their composition and reproducibility. Copies of half-tones must be photographic prints not photocopies. One set of camera-ready photographic prints of all line drawings should be submitted with the revised manuscript; these should be at final publication size (see 2.6). Originals of line drawings will be requested only in exceptional circumstances. Referees are appointed to assess the papers, and the author will be informed of the decisions reached. In multi-authored works, correspondence will be with the first-named author unless otherwise arranged. Proofs will be sent directly to the title sheet. Where indication of the country or region of origin would assist in the identification of the periodical, additional wording should be included: e.g. Journal of the Geological Society, London. Accents should be included in all foreign books and serial titles. Postgraduate theses are treated as published books.

2. PREPARATION OF PAPERS

2.1. Typescripts

Typescripts should be double-spaced throughout (including references and figure captions), with each page numbered serially; A4 size is preferred. The typescripts should be arranged as follows:

1. Title, which should be concise yet informative.
2. Name(s) and full postal address(es) of author(s).
3. Summary. This should not exceed 250 words, and should be self-contained summary of the main achievements of the paper (without references) and not a mere statement of the scope and contents of the paper.
4. Main text. This should be organized according to the system of headings described in section 2.2.
5. Appendices, if necessary.
6. References (see section 2.2).
7. Tables, each on a separate sheet, together with its caption.
8. List of figure captions.

2.2. Headings

Four grades of headings are normally used in the Proceedings:

1. FIRST-ORDER HEADING
2. SECOND-ORDER HEADING
3. THIRD-ORDER HEADING
4. FOURTH-ORDER HEADING

In certain circumstances (e.g. where there are frequent short sections) it may be decided to vary this arrangement. The introductory section should not be numbered: the heading 'Introduction' may, for clarity, be used on the typescript, although it will not be used in the printed paper. The first line of the first paragraph following each heading should begin at the left-hand margin (no indent).

2.3. Systematic paleontology

The layout for paleontological systematics should follow the conventions adopted by the Palaeontographical Society. Examples of house style may be found in Volume 49, part 4.

2.4. Systematic lithostratigraphy

Any new lithostratigraphic terms should be rigorously defined to conform to the various codes for lithostratigraphic nomenclature. Examples of house style may be found in previous volumes (from Vol. 45 onwards), e.g. Vol. 48, pp.124-136, 389-390, 447-452.

2.5. References

All references cited in text and captions must appear in the list, and vice versa. The accuracy of references is the responsibility of the authors. Within the text, the citation should be name and date: Young & Bird (1822) or (Young & Bird 1822) depending on context. Where the reference has three or more authors, the text citation should be first-named author et al. Periodical titles should be quoted in full, and follow the wording on the title sheet. Where indication of the country or region of origin would assist in the identification of the periodical, additional wording should be included: e.g. Journal of the Geological Society, London. Accents should be included in all foreign books and serial titles. Postgraduate theses are treated as published books.

2.6. Illustrations

Illustrations should be prepared to column width of 85 mm, intermediate width of 110 mm (printed with caption in 50 mm-wide block alongside) or page width of 176 mm. The printed page height is 250 mm. The caption will be placed beneath a full-page illustration and the height of the latter should be reduced accordingly. Authors proposing to include coloured figures are advised to consult the Ediors; these are very expensive to produce and authors may be asked to bear the costs.

Lettering should be no less than 1 mm high after reduction. Half-tone illustrations should be high-quality glossy prints with good contrast. Magnification should be indicated by means of a scale bar on the photograph or, if this is not possible, in the figure caption. All half-tone illustrations are referred to as Figures, not Plates. In composite illustrations the individual photographs should be labelled 1, 2, 3, etc. or A, B, C, etc. Where possible, labels should be on the photographs, not in the space between.

3. OFFPRINTS

25 free offprints per paper are provided: additional copies may be purchased and should be ordered at page proof stage.

Acknowledgement. Some figures published in the Proceedings display the National Grid, taken from the Ordnance Survey map with the permission of the Controller of Her Majesty's Stationery Office.
PROCEEDINGS OF THE
Yorkshire Geological Society
VOLUME 54 PART 4 NOVEMBER 2003

CONTENTS

J. B. Riding, J. Rose and S. J. Booth
Allochthonous and indigenous palynomorphs from the Devensian of the Warham Borehole, Stiffkey, north Norfolk, England; evidence for sediment provenance

J. W. Tilsley and R. M. Owens
Late Visean and Early Namurian trilobites from the northern and eastern margins of the Derbyshire Dome

S. K. Donovan, D. N. Lewis & J. W. Tilsley
Platycrinid crinoid cups from the Lower Carboniferous of Yorkshire and Derbyshire

T. R. W. Hawkins and G. H. Saul
Complex extensional faulting of Triassic rocks north of York, North Yorkshire, UK

R. Forrest and N. Oliver
Ichthyosaurs and plesiosaurs from the Lower Spilsby Sandstone Member (Upper Jurassic), north Lincolnshire

ERRATUM
P. Doyle
Type belemnites of Simpson’s Fossils of the Yorkshire Lias
