Cover illustration: View of Callow Bank [SK 252 823], near Hathersage, Derbyshire, looking north from the roadside below Higger Tor. Interbedded siltstones and fine- to medium-grained sandstones, interpreted as mouthbar and interdistributary bay deposits, overlie basin-floor mudstones with the *Verneulites sigma* and *Bilinguities superbilinguis* marine bands near the base. The sandstones form the lower part of the Chatsworth Grit (equivalent to the lower part of the 'main sandstone body' of Waters *et al.*, this part). Callow Bank is included in one of the itineraries in the YGS Field Guide, *Yorkshire Rocks and Landscape*. Photograph by Ian Chisholm.
