Proceedings of the Yorkshire Geological Society (ISSN 0044-0604) is published twice a year (May and November) by the Geological Society Publishing House. Each Volume comprises 4 Parts and spans 2 years. Trade subscription enquiries should be addressed to the Journal Subscription Department, Geological Society Publishing House, Unit 7, Brassmill Enterprise Centre, Brassmill Lane, Bath BA1 3JN, UK.

Cover illustration: Crags of the late Neoproterozoic South Charnwood Diorite in the foreground, near Groby, Leicestershire, UK, looking south towards Lady Hay Wood where Lower Cambrian rocks of the Brand Group crop out. As discussed by Scotney, Carney and Harwood in this part of the *Proceedings*, the Lower Cambrian rocks unconformably overlie the diorite. The low ground in between is primarily filled by Triassic rocks of the Mercia Mudstone Group, deposited in a palaeovalley that developed during pre-Triassic erosion when the South Charnwood Diorite was eroded into steep-sided, low-lying domes. Photograph by Phil Scotney.
