Proceedings of the Yorkshire Geological Society (ISSN 0044–0604) is published twice a year (May and November) by the Geological Society Publishing House. Each Volume comprises 4 Parts and spans 2 years. Trade subscription enquiries should be addressed to the Journal Subscription Department, Geological Society Publishing House, Unit 7, Brassmill Enterprise Centre, Brassmill Lane, Bath BA1 3JN, UK.

Cover illustration: Lose Hill (left) and Back Tor (centre right) looking south-eastwards from Edale, Derbyshire, UK. Turbidite sandstones of the Hebden Formation (Shale Grit) crop out along the crest of the ridge and overlie distal turbidite deposits (Mam Tor Sandstone), which occupy the lower slopes. The Hebden Formation overlies the hemipelagic Bowland Shale Formation, which crops out in the low ground in the foreground. The turbidite beds record the first incursion of Namurian (early Pennsylvanian) deltaic deposits into the district. In this part of the *Proceedings*, C. M. Jones discusses controls on Namurian deltaic sedimentation in the Central Pennine Basin.
